High grade photopolymer
All premium clear estamps are made from high grade photopolymer resin, not silicone, acrylic or rubber.
Crystal Clear
High clarity, shiny stamps, transparent for easy inking and positioning of stamped image.
Naturally sticky back
Premium clear stamps have an excellent back adhesion, allowing repositioning many times on an acrylic block.
Excellent imaging
All clear stamps are made using an imagebright filter that provides unparalleled image resolution both in relief and reverse. This even enables photograph stamps to be produced.
Plate relief
We make stamps in 3.2mm. (125”) giving deep plate relief and fine detail.
Health and safety
Cured photopolymer stamps carry no health risk (we have not tested for FDA compliance). They contain no latex, phthalates, melamine, carcinogens or toxic or harmful compounds.
