# **Safety** warnings

All cleaning tanks should be handled with care to ensure maximum performance. Please read this user manual before using your

Air Wash cleaner:

- Ensure power is disconnected before attempting to add or remove fluid.
- If pouring fluid away, pour away from the electrical socket on the rear control panel.
- Do not let items rest on the bottom of the tank, Loose chemicals, oils and water (not including the always use the basket and the bracket.
- When submerging parts ensure fluid is not displaced out of the tank.
- Never change the fuse for a higher rated one.
- Do not use the product if it is in an unstable condition i.e. susceptible to fire or explosion

We recommend keeping your Photocentric Air Wash L away from the below conditions:

- High humidity
- Unpredictable fluctuating temperatures, too hot or too cold conditions can affect the functionality and lifespan of the machine.
- Non-stable surfaces
- Corrosive gases
- cleaner currently being used)
- Where explosives or unstable chemicals are stored

### **Product & Accsories**

Photocentric AirWash L unit includes the below items:

- Basket
- Power cable
- Instruction manual
- Bracket

### **Product Operation – Cautions**

Please read and follow the guidelines provided whilst operating this machine - if these are not adhered to. they can cause damage to your machine and may invalidate your warranty. Before starting the machine ensure that:

- •All buttons and switches are turned off
- •Cleaner is present in the tank up to maximum level
- •No liquid has splashed on the electronic parts of the machine
- •The power supply is earthed and grounded
- •The machine is not moved whilst in use

# **Product Operation**

### Setting up AirWash L for the first time

Open the lid. Lift out the print bed support bracket and the basket. Please note that the basket has a longer stand on the left-hand side to keep the basket level in the tank.

### Step 2

Fill the tank with Photocentric Resin Cleaner to

### Step 3

Plug the machine into the mains supply socket (do not hard wire this machine into the mains supply without a suitable cut-off switch)

#### Step 4

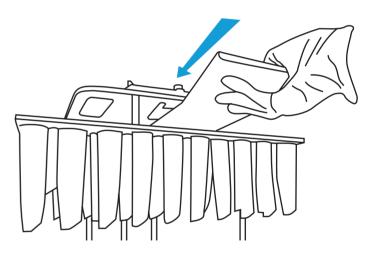

Place the basket inside the unit

## **Using Air Wash L**

Make sure the lid is left open before bringing the platform to the Air Wash.

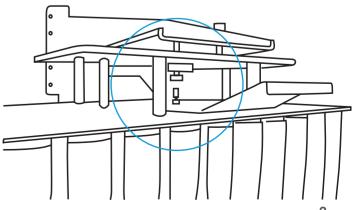

### Step 2

Take the bracket to your LC Magna printer and slide the bracket under the platform location plate.

### Step 3

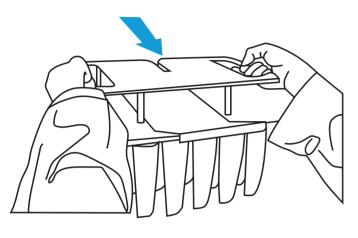

Try to centralise the bracket pin to middle of platform.

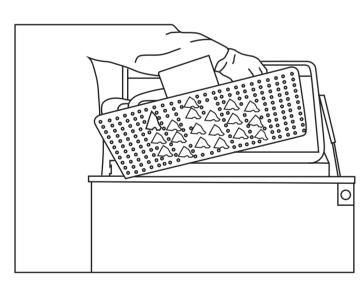

### Step 4

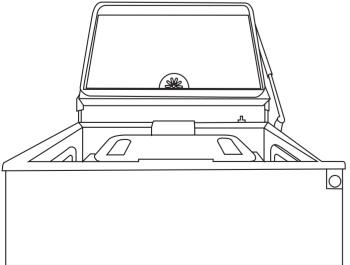

Remove the platform the usual way, loosening the central knob and holding the handles.

### Step 5

Carefully lower the platform and prints into the tank and locate the support bracket on the front and rear tank lips.

#### Step 6

Close the lid. Please note that the machine will not start if the lid is open.

### Step 7

Press the start button to start the machine.

### Step 8

Run the machine for the required time appropriate to your resin (Note: Please check the resin TDS to ensure the correct cleaning time)

#### Step 9

Open the lid, lift out the platform and take it to a nearby sink.

### Step 10

Remove the bracket and rinse the resin cleaner off the print with warm water prior to post curing your print.

### **Maintenance**

- •To clean the tank simply connect a suitable pipe to the drain valve and allow the used chemicals to flow into a suitable container for disposal.
- Note the drain valve inner diameter is 30mm and recommended materials for the pipe can be EPDM, EPM, NR.
- You will see that the tank has a slope to the left to collect all the debris in the tank scoop this up for safe disposal
- •If you have a build-up of resin on the air bars, using a 14 mm spanner undo the 2 nuts holding the assembly to the tank. Then remove the assembly and clean. Re-fit in reverse ensuring that the holes are facing down.
